## **POLISHING COMPOUNDS**

## LIQUID POLISHING COMPOUNDS

For our very wide range of Marpol liquid polishing compounds, we are using the highest quality of abrasives such as aluminum oxide, corundum, emery or tripoli. The strong emulsions and the quality of the production process has been guaranteed that the longest possible life without separation between the heavy and the light particles.

### Advantages of Marpol Liquid Compounds

- Degreasing without problems
- Low consumption provides an economical use
- High cooling & Longer life of the buffs
- More polishing efficiency in less time
- Better polishing quality
- Best surface solution with correct match up

# SOLID POLISHING COMPOUNDS

[www.marpol.com.tr](http://www.marpol.com.tr)

We have a wide range of the solid polishing compounds in order to meet the various and different requirements for the manual and automatic usage. The abrasives such as the aluminum oxide, corundum, tripoly, etc. have been used in the wax has been provided from the robust and reliable manufacturers to protect the consistently high quality standards. We have developed a wide range of products for the polishing of aluminum and non - ferrous metals.

The major reasons why there are so many different products in our solid polishing compounds production program.

- Revision in the customer's polishing process
- Product diversity
- Desired surface quality variety according to the companies
- Desired color diversity on the "Finish" surface at the final polishing " Blue effect, Yellow effect, Deep Black effect. Etc.
- Human sense which is a subjective conception

**POLISHING BUFFS**

## POLISHING BUFFS
